

PLAN©

Taking the guess work out of the Planning rules.

PLAN© provides property specific planning information over the Internet.

A PlanningXchange Module

Connect *and* Communicate *with your* Community

PLAN© is the foundation module for the next generation online solution for State and Local Government planning – ICON Software Solution's PlanningXchange.

Working out what rules apply to a specific property is a challenging task using traditional hard copy planning scheme information.

Trying to ascertain whether the property is affected by bushfire, landslip, flooding or other critical factors can be a lengthy and confusing process if the data is not readily available. Also, complying with colour scheme criteria, height restrictions and set-backs is a necessary component of any planning application.

PLAN© provides planning information online. Your hardcopy planning scheme is now an XML driven database, cross referencing property information held in your corporate systems. All the rules are held in a single

location including policies, procedures, notes and precedents.

The introduction of this technology increases the efficiency of business processes, improves performance and makes better use of often overstretched resources.

Benefits of PLAN©

- consistency – once your data is converted it becomes your only source of planning information
- reduces your call centre traffic for simple planning queries
- increases staff productivity
- creates a cooperative, productive relationship with your community
